

Visual Studio Project Notes

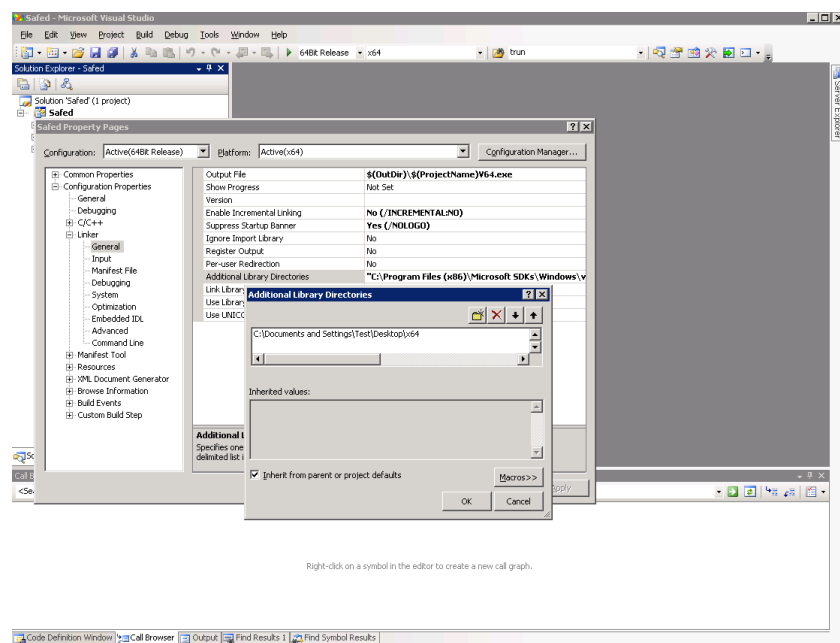

The Safed agent for Windows is using the regex library for regular expression manipulation (<http://gnuwin32.sourceforge.net/packages/regex.htm>) and the wolfssl library for secure communication through a TLS connection between Safed and the rsyslog server, and HTTPS access to the embedded Safed web server (<https://github.com/wolfSSL/wolfssl>)

Set the project environment as shown in the following images using the installation path of the third part libraries.

Additional Include Directories for Win32 and x64:

Additional dlls: wolfssl.dll and regex2.dll:

Additional libs: wolfssl.lib and regex2.lib
